

Shuo Zhang

University of Chicago, Department of Statistics, 5747 S Ellis Ave, Chicago, IL 60637.

EDUCATION

University of Chicago

PhD in Statistics

Sep.2025-Present

University of Science and Technology of China (USTC)

Bachelor of Mathematics and Applied Mathematics

Sep.2021-Jul.2025

Overall GPA:4.0/4.3

RESEARCH INTEREST

Large language models, Post-training, Agentic reinforcement learning

ACADEMIC EXPERIENCE

Department of Statistics, University of Chicago

Topic: Noisy Monotone Adversary

July.2024-Jun.2025

Advisor: Cong Ma, Assistant Professor of Statistics, University of Chicago

- Work on a project about the Monotone adversary with noisy feedback in the recommender system.
- Come up with a discretization method for a class of functions with query complexity $\exp(d)$, where d is the dimension of the Euclidian Space. This method indicates that queries are all we need to find an ϵ -optimal point almost surely. It mainly uses nets to mark the points in space and zooms in during each iteration.
- Come up with a theorem for determining the possible direction of the optimal point. This is a general discretization method on sphere, which helps detect optimal points on a surface.
- Prove several problems about random walk on $\mathbb{S}^{d-1}$. This shows the impossibility to use any existing probabilistic expectation method (Gaussian noise) to solve the project.

Department of Statistics and Finance, University of Science and Technology of China

Topic: Simultaneous Inference for Transfer Learning in High-dimensional Linear Models

Sep.2023-June.2024

Advisor: Xiao Guo, Associate Professor of Statistics, USTC

- Read books and articles about the use of Lasso in High-dimensional Statistics.
- Read articles about High-dimensional Statistics, Transfer Learning and Simultaneous Inference.
- Construct a simultaneous estimator for a simultaneous inference in a case of High-dimensional Linear Models.
